

PHOTOS FROM TAPE & DVD

4x6 PHOTOGRAPHIC PRINTS FROM VIDEO

We can create photographic prints or digital files from almost any video source.

If you missed some of those special shots at your wedding, or other family events and you have some home videos or DVD, we can help. Video offers a large selection of material to choose from. 1 second of video contains 30 images, one minute of video contains 1800 images, and one hour of video contains 180,000 images. Once the source video is loaded into the computer, it is relatively easy to go to a particular area and choose a still capture. Digital sources usually produce higher quality images, although VHS and other analog tapes will produce images of lesser quality. Not every frame of video would make a good still shot, but there is a lot to choose from.

All the images on this page were captured directly from our digital video tape.

The image above has been cropped to fit 4x6 photographic prints, they can also be sized to 3x5. These images may lack the quality for larger prints, but it is possible. We can have them printed or supply you with digital files on CDs that you can print yourself. This work is done at an hourly rate (\$35) plus print charges. All images are captured, interlace movement is removed, color correction and cropped to the specified size.
